

A committed partner in supporting the development of sustainable healthcare across Africa

GE Healthcare

For over 100 years, GE has been at work bringing its latest medical technologies, services, global capabilities and solutions offerings to Africa.

From medical imaging, software & IT, patient monitoring and diagnostics to drug discovery, biopharmaceutical manufacturing technologies and performance improvement solutions, GE Healthcare helps medical professionals around the world deliver better healthcare to their patients.

In Africa, areas of focus include maternal and new born health, emergency care, oncology and cardiology offerings and capacity building.

A commitment to scaling up and being 'in Africa for Africa'

In several countries including South Africa, Nigeria, Algeria and others, GE was among the first global healthcare providers to establish direct operations, led by a commitment to localization and building sustainable long-term and local partnerships.

Service Excellence

With 30% of parts available same day (in specific countries), GE's unrelenting commitment to service plays a key role in improving operating uptime, providing more accurate diagnosis and improved patient safety. The experienced local team is supported by GE global expertise able to provide fast and reliable service.

GE's footprint in Africa

- 100+ years in Africa
- 2,500+ GE employees
- Operations in ~40 countries from Northern to Southern Africa
- 25,000+ healthcare products and technologies deployed in medical facilities across the continent
- 250+ field engineers connected to a global team of 8000+ field and remote engineers
- 5 Service Centers; 3 Repair Centers; 4 Warehouses

Supporting UN Millennium Development Goals (MDGs) 4 and 5

GE in Africa is making a difference in the implementation of MDGs 4 (to reduce by two-thirds the under-five mortality rate) and 5 (to reduce by three-fourths the maternal mortality rate) by 2015 and is committed to impacting access and the continuum of care in a rural setting, by continuing to design products and solutions leveraging ongoing research and collaboration in the global health community. GE partners with the United Nations Foundation on the "Every Woman Every Child" commitment, as well as on the MDG Health Alliance and African First Ladies Initiative.

A Partner in the Fight Against Cancer

With 50+ years global experience in the field of oncology, GE is working with key government and private partners to bring its oncology solutions to Africa. Covering the spectrum of care, GE's unique and comprehensive offerings support healthcare professionals in cancer screening, diagnosis and disease staging to treatment planning and monitoring.

A focus on Training

With 40+ years developing human capital in healthcare via leadership, technical and clinical trainings through a network of GE learning institutes around the world, GE Healthcare trains 10,000+ customers globally each year across 120 classroom

courses. In April 2013, GE opened its Advanced Applications Center in Algeria to provide vocational and continuous education, its first dedicated training facility in Africa, aimed at boosting healthcare sector competencies and supporting a better patient experience. GE is committed to the expansion of training services across Africa.

GE Healthcare Partners

Offering outcome-based healthcare advisory services, technology and analytics expertise, GE Healthcare can support in the design of future state end-to-end patient pathways to improve outcomes and cost for key diseases; optimize care delivery management to increase patient flow, reduce waste and improve the patient experience; and transform culture to deliver operational efficiencies and drive stronger organizational performance. Today, in one of the Middle East's healthcare systems, GE Healthcare Partners eliminated 9,000 hours of administrator paperwork and 36,000 patient waiting hours across 12 Emergency Departments.

Today we are witnessing a new era in the development of healthcare across Africa. With tremendous strides being taken to transform healthcare at every level across the continent, healthcare providers are focused on driving meaningful improvements across several fronts. From upgrading and modernizing the healthcare infrastructure and combating the rise of non-communicable disease, to training and education for healthcare professionals; governments, the private sector and industry alike, are together committed to supporting better patient-outcomes for all Africans.

GE is committed to increasing access to affordable and quality healthcare through its \$6B global healthymagination initiative and is proud to have been selected as a strategic partner by several Ministries of Health and private healthcare providers in supporting the delivery of critical healthcare development programs across Africa.

Some of GE's work in healthcare across the continent:

In Algeria

- As announced by the Algerian Ministry of Health (MoH) in October 2013, GE was selected as a strategic partner to support the government's plan to improve healthcare services, with a performance improvement program aimed at improving operating efficiencies now underway.
- GE Healthcare is also working with several key private partners to accelerate cancer care in the country.

In Egypt

- In Egypt, GE is supporting the MoH with the development of a centralized image

repository for the country, enabling hospitals to send, share and store xray images to facilitate remote assessment by radiologists, addressing critical clinical and operational challenges facing many hospitals in the emerging markets.

In Nigeria

- GE Healthcare in April 2012 signed a landmark strategic Memorandum of Understanding (MoU) agreement with the MoH in Nigeria to explore key initiatives and partnerships in critical healthcare development areas.
- With a focus on advancing healthcare

transformation in the area of capacity building and infrastructure enhancements, GE Healthcare in 2013 collaborated to commission three new Diagnostic Imaging Centers and delivered education and training in seven A&E hospitals across the country. GE also partnered to design the first-ever Paramedic Curriculum approved by the National Council on Health.

- In line with MDGs 4 & 5, GE is actively partnering with the government of Nigeria to introduce ultrasound usage and task-shifting training for ante-natal care, in support of the Save One Million Lives initiative. The program aims to support mothers and babies throughout Nigeria especially in rural/low-resource settings, with a focus on improving the quality of care by 2015.

In Kenya

- In May 2012, GE signed a strategic MoU with the Government of Kenya to explore partnership opportunities in several areas including healthcare, in line with the country's Vision 2030.
- In November 2012, with a focus on advancing surgical care in Africa, GE Healthcare chose Kenya as the global launch site for GE's Carestation 30 anesthesia delivery system. GE also introduced globally for the first time in Kenya, the Safe Surgery Clinical Training Program supported by the Kenya Society of Anaesthesiology in partnership with the National Association of Anesthesia Clinical Officers. The program has today trained more than 130 professionals across Kenya.
- In December 2013, Vanderbilt University in the United States announced that it

received a US\$3 million grant from the GE Foundation's Developing Health Globally program to fund international medical education and research in Kenya and other low-resource regions of the world. The scheme will focus on the development of training programs that can demonstrably lower surgical and obstetric mortality, as well as dramatically improve and expand education of anesthesia providers in these regions.

- Most recently, in January 2014, GE, USAID and the Kenya Commercial Bank announced a first-of-its-kind collaboration for the development of SME healthcare in Kenya through a scheme to provide up to \$10 million in local financing for the development of private health facilities including doctor partnerships, diagnostic centers and hospitals in Kenya.

In Tanzania

- In partnership with the Ifakara Health Institute of Tanzania, GE is working to provide access to portable ultrasound and trainings on these devices to midwives and nurses. The program is aimed at making ultrasound services available for pregnant women in rural Tanzania and thus increase reach in remote areas. Reinforcing this commitment, GE in 2013 donated US \$85k in handheld ultrasound devices and related equipment to the Kisarawe District Hospital, in the Pwani District of Tanzania.

In Ghana

- In June 2013, GE signed an MoU with the Ghana MoH to support the development of quality healthcare in the country. Under the agreement, the MoH and GE are exploring three potential areas for

collaboration, including the introduction of GE's handheld portable ultrasound into Ghana's Community-based Health Planning and Services in support of MDGs 4 & 5; the development of diagnostic centers of excellence through Private Public Partnerships and a focus on training and capacity building.

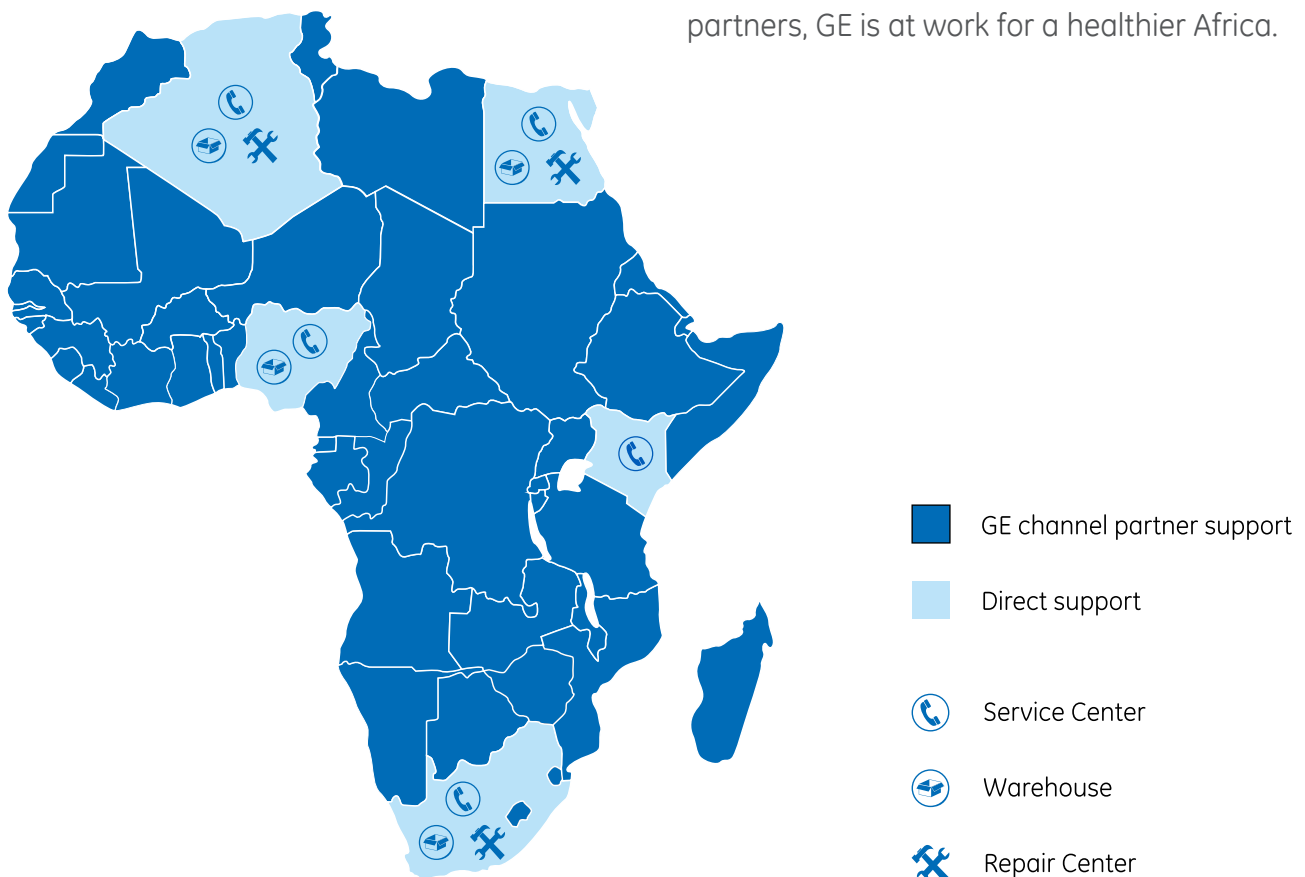

In Ethiopia

- With the support of a grant from USAID and in partnership with the Ethiopian Pediatrics Society, GE is evaluating patient outcomes in maternal and infant care through the introduction of technology and training solutions for midwives and newborn care. This effort is aimed at scaling up capacity and supporting access to improved care across regions in Ethiopia.

In South Africa

- In February 2014, GE announced the donation of US\$1 million to support the Nelson Mandela Children's Fund. The donation will help fulfil Mandela's lasting wish for improved child healthcare in Southern Africa and will contribute towards ongoing efforts to further develop much needed healthcare facilities including the Nelson Mandela Children's Hospital.
- GE also partnered with the eThekweni hospital and heart centre, the country's first black-empowered hospital, to equip it with world-class cardiology and imaging equipment.

With over 100 years in Africa, GE is committed to bringing the best of its resources, expertise and capabilities to help address some of the continent's toughest healthcare challenges. Together with its partners, GE is at work for a healthier Africa.

healthymagination

GE's commitment to sustainable health. Solutions that help doctors and hospitals deliver better healthcare to more people at lower cost.

Reduce cost
of many health procedures and processes with GE technologies and services.

Increase people's access
through simplifying and refining healthcare procedures and standards of care.

Improve quality and efficiency
to services and technologies essential for health, reaching 100 million people in new ways every year.

Better health for more people.
